Energy-saving lighting control strategies

Strategy		Potential savings
High-end trim/tuning sets the maximum light level based on customer requirements in each space.*		10–30% Lighting
Occupancy/vacancy sensing turns lights on when occupants are in a space and off when they vacate the space.*		20–60% Lighting
Daylight harvesting dims electric lights when daylight is available to light the space.*		25–60% Lighting
Personal dimming control gives occupants the ability to set the light level.*		10–20% Lighting
Controllable window shading moves shades to reduce glare and solar heat gain.*		10–20% Cooling
Scheduling provides scheduled changes in light levels based on the time of day.*		10–20% Lighting
Demand response automatically reduces lighting loads during peak electricity usage times.*		30–50% During peak period
Plug load control automatically turns off loads after occupants leave a space.*		15–50% of Controlled loads
HVAC integration controls heating, ventilation, and air conditioning systems through a contact closure.*		5–15% HVAC

*Go to lutron.com/references for more information

Codes can sometimes be complicated and difficult to navigate. This commercial application guide provides examples of how Lutron products can be used to meet or exceed code requirements. This guide focuses on Vive and Vive compatible solutions, but our other control systems offer similar features.

Lutron Product Capabilities: Commercial Applications

Strategies for code/standards compliance	Local Solutions			Panel Solutions	
	Wallbox	Vive	Vive with wireless hub*	Energi Savr Node	Quantum
Occupancy sensing	●	●	●	●	●
Multi-level lighting control	●	●	●	●	●
Daylight harvesting		●	●	●	●
Receptacle control		●	●	●	●
Timeclock			●	●**	●
Demand response			●†	●†	●
Energy monitoring			●		●
BACnet integration			●		●

To learn more about these products and their specifications, go to **lutron.com/catalogs**

 * For the latest information on products compatible with the Vive wireless hub go to lutron.com/vive
** Requires QS Timeclock
 † Automated Demand Response capability requires signal from a third-party device

The requirements listed below are summarized for simplicity and may have other exceptions that were omited.

	Minimum control type	Description	Code provision
Local Control	Switching	Lighting shall be capable of turning ON and OFF. There shall be at least one manual device for control of the lighting within a space. See code for spaces that allow remote location of control.	9.4.1.2 (a) Exceptions
	Multi-level or dimming[1]	Lighting shall be capable of providing at least one level between 30% and 70% of full power, in addition to ON and OFF. There shall be at least one manual device for control of the lighting within a space. See code for spaces that allow remote location of control.	9.4.1.2 (a)
Automatic Control[3]	Timeclock[2]	**Interior:** Scheduled control, based on time-of-day, turns lighting ON or OFF based on typical occupancy. Occupancy sensors also comply as an alternate to using a timeclock. **Exterior & parking garages:** Scheduled control, based on time-of-day and sunrise/sunset, turns lighting ON or OFF based on typical occupancy and daylight (requires astronomical timeclock).	9.4.1.1 (a) 9.4.1.3 (a) & (c) 9.4.1.7 (a), (b), & (c)
	Occupancy sensor	Automatic control turns lighting ON upon occupancy or OFF after a vacancy of 30 minutes or less.	9.4.1.2 (b) 9.4.1.3 (b)
	Full ON	When initiated by a timeclock or occupancy sensor, lighting is automatically turned ON to maximum lighting power.	9.4.1 Exceptions
	Partial ON	When initiated by a timeclock or occupancy sensor, lighting is automatically turned ON to 50% or less of maximum lighting power.	9.4.1
	Full OFF	When initiated by a timeclock or occupancy sensor, lighting is automatically turned OFF.	9.4.1.2 (b)
	Partial OFF	When initiated by a timeclock or occupancy sensor, lighting is automatically reduced by at least 50% of maximum lighting power (30% for enclosed parking garages and exterior). Automatic full OFF also complies.	9.4.1.3 (b) 9.4.1.6 (g) 9.4.1.7 (c)
Other	Daylight responsive control[1]	**Interior:** A sensor which adjusts lighting in response to available daylight is required for sidelight and skylight zones. There must be at least two light levels between ON and OFF. See the "Daylight Zone Requirements" diagrams for more information. **Exterior and parking garages:** A photosensor can be used as an alternate to the dawn/dusk operation of an astronomical timeclock. The perimeter 20 ft. of parking garages with access to daylight must automatically reduce lighting power in response to daylight.	9.4.1.3 (d) 9.4.1.4 9.4.1.5 9.4.1.7 (a)
	Receptacle control	At least 50% of the receptacles in the space shall automatically turn OFF based on typical occupancy or after a vacancy of 30 minutes or less. Plug-in devices do not comply.	8.4.2

For areas being used as a path of egress or fixtures being used for emergency, verify compliance with your local authority having jurisdiction. Acceptance (functional) testing is required for all new construction applications to ensure that control hardware and software are calibrated, programmed and functioning properly (Code provision 9.4.4).

1 When multi-level lighting control and/or daylight responsive control is required, Lutron recommends using continuous dimming to allow for smooth light level adjustment and maximize energy savings.

2 Lutron recommends using occupancy sensors to achieve automatic on/off requirements in place of a timeclock to maximize energy savings and optimize user experience.

3 Manual ON is always permitted for interior applications. Provide manual ON control when no automatic ON is indicated.
Daylight Zone Requirements:
Fixtures in primary side-light or skylight zones must be controlled by a daylight sensor. Fixtures in daylight zone must be controlled separately from fixtures in the rest of the space.

Daylight Exceptions:
Daylight control is not required in primary sidelighted areas less than 250 sq. ft. and in areas under skylights less than 900 sq. ft.

Suggested Code Compliant Solutions

ASHRAE 90.1-2010

The compliant solutions listed below are suggested based on total installed cost, simplicity of design, and basic functional needs for the space. These solutions do not represent the only compliant options to meet lighting and receptacle control requirements. Applications in this guide will illustrate these solutions and/or alternate solutions for advanced functionality.

Diagram key:
- ◉ = New construction
- ✦ = Lighting retrofit[1]
- ✷ = New construction and retrofit[1]

(In the tables below: NC = New construction, LR = Lighting retrofit, NC+R = New construction and retrofit)

		Atrium	Break Room	Classroom, Lecture Hall, Training Room	Conference, Multi-purpose Room	Egress Corridor[4]	Lobby
Local Control	Switching						
	Multi-level or dimming	NC	NC	NC	NC	NC	NC [6]
Automatic Control[2]	Timeclock	LR					
	Occupancy sensor		NC+R	NC+R	NC+R	NC+R	NC+R
	Full ON	LR				NC+R	NC+R
	Partial ON						
	Full OFF	NC+R	NC+R	NC+R	NC+R	LR	NC+R
	Partial OFF					NC	
Other	Daylight responsive control	NC	NC	NC	NC	NC	NC
	Receptacle control			NC			

		Open Office (>250 sq. ft.)	Private Office (<250 sq. ft)	Restroom	Egress Stairwell[4]	Storage Room	Facade/ Landscape	Parking Garage (Not Roof)[3]	Other Exterior[5]
Local Control	Switching			NC		NC			
	Multi-level or dimming	NC	NC		NC				
Automatic Control[2]	Timeclock						NC	NC	NC
	Occupancy sensor	NC+R	NC+R	NC+R	NC+R	NC+R		NC	
	Full ON	LR		NC+R	NC+R		NC	NC	NC
	Partial ON	NC							
	Full OFF	NC+R	NC+R	NC+R		NC+R	NC	NC	NC
	Partial OFF				NC+R			NC	NC
Other	Daylight responsive control	NC		NC	NC	NC		NC	
	Receptacle control	NC	NC						

1 Retrofit requirements indicated are for lighting alterations greater than 10% of the connected load in a space.

2 Manual ON is always permitted for interior applications. Provide manual ON control when no automatic ON is indicated.

3 When typically occupied, the sensor provides Partial OFF functionality. When typically unoccupied, the sensor provides Full OFF functionality. For entrances and exits, lights are scheduled to Full OFF when typically unoccupied and at night; daylighting and occupancy sensing are not required.

4 For areas not designated as a path of egress, the occupancy sensor must turn lights to full OFF.

5 Astronomical timeclock shall ensure all lights are off during daylight hours. Lights should be scheduled to Partial OFF during night hours. See section 9.4.1.4 for scheduling times.

6 Multi-level or dimming capability is not required in non-daylit lobbies.

This application guide is designed to help specifiers and contractors understand codes and Lutron controls in a simple manner. Each of the pages will lay out different spaces, the corresponding lighting control products and the way the system is setup in the space.

For Specifiers
Use this application guide for design suggestions, the way the system operates and to specify the relevant products for each space.

For Contractors
Use this application guide to understand how the system is installed, the way the system must operate and to order the correct products for each application.

This guide offers up to three solutions per space type.

The **Retrofit Solutions** are simple and inexpensive solutions, generally suited for a basic retrofit.

The **New Construction Solutions** are value driven, generally best suited for new construction.

The **Recommended Solutions** have advanced functionality for greater comfort and energy savings.

Room type

Type of solution

Type of solution

Learn about the products visible in the space and the different options available for these.

Learn what strategies are implemented in the space

Learn what energy savings you achieve over manual shut-off

Understand how the space functions with the installed system

Understand how the products are laid out in the space

Learn more about the products used in the space

ASHRAE 90.1-2010

Visible System Components

Pico wireless control

Radio Powr Savr wireless corner-mount vacancy sensor and daylight sensor

Control Functionality

Occupant Enters:
Lights do not automatically turn on when an occupant enters the space; lights must be turned on manually. Maximum light level is set to 80%.

When Occupied:
Automatic: Overhead lights dim/brighten based on daylight availability. There is one perimeter daylight zone.

Manual: Occupant uses wall dimmers to set desired light levels for both general and white-board lights.

Occupant Exits:
All lights automatically turn off 15 minutes after all occupants exit.

Add a Vive wireless hub to enable simple setup and re-zoning, system monitoring, timeclock functionality, and advanced integration.

Symbol	Model Number	Description	Qty	List Price Each
	RMJS-8T-DV-B	PowPak dimming module with 0-10V	3	$ 180.00
	LRF2-DCRB-WH	Radio Powr Savr wireless daylight sensor	1	$ 150.00
	LRF2-VKLB-P-WH	Radio Powr Savr wireless corner-mount vacancy sensor	1	$ 105.00
	PJ2-3BRL-GWH-L01	Pico wireless 3-button with raise/lower control	2	$ 27.00
	PICO-WBX-ADAPT	Pico wallbox adapter	2	$ 9.50

Code Notes: For non-daylight classrooms, all general lighting can be connected to a single 0-10V dimming module.
Receptacle Control is required for Shop and Laboratory classrooms.
Want to add a Vive wireless hub for more features? Go to lutron.com/vive for complete compatibility and design details.
This solution requires 0-10V enabled ballasts and drivers by others.

Vive Local Solutions Layout

ASHRAE 90.1-2010

This is a high-level overview of the local solutions layout. For individual room requirements refer to the detailed room type solutions in this guide. A single PowPak module can control a single or multiple fixtures. The products shown here are representative of local solutions. Multiple product options are available to meet the needs of the space.

Vive wireless hub*

PowPak module

● Occupancy sensor

● Pico wireless remote control

● Daylight sensor

Vive wireless hub Features:

- Central control, management, and monitoring of Vive devices via web browser
- Supports astronomic and time-of-day events
- Two contact closure inputs for 3rd party integration such as Automatic Demand Response
- WiFi access for easy commissioning
- Control up to 10,000 sq. ft. with a single hub
- Optional BACnet integration

* Go to lutron.com/vive for complete compatibility and design details

Radio Powr Savr wireless hallway occupancy sensor

Control Functionality

Occupant Enters:
All non-emergency lights automatically turn on to maximum light level.

When Occupied:
Manual: Occupant uses wall switch to turn all non-emergency lights off.

Occupant Exits:
All non-emergency lights automatically turn off 15 minutes after all occupants exit.

Add a Vive wireless hub to enable simple setup and re-zoning, system monitoring, timeclock functionality, and advanced integration.

To emergency power

Symbol	Model Number	Description	Qty	List Price Each
	RMJS-8T-DV-B	PowPak dimming module with 0-10V	1	$ 180.00
	LRF2-OHLB-P-WH	Radio Powr Savr wireless hallway occupancy sensor	1	$ 105.00
	PJ2-3BRL-GWH-L01	Pico wireless 3-button with raise/lower control	2	$ 27.00
	PICO-WBX-ADAPT	Pico wallbox adapter	2	$ 9.50

Code Notes: Verify that the egress fixtures go to full output upon loss of control signal. For projects that require UL 924 compliance, provide an automatic load control relay (ALCR) per load controller connected to emergency fixtures. Add a daylight sensor for corridors with daylight zones. Want to add a Vive wireless hub for more features? Go to lutron.com/vive for complete compatibility and design details. This solution requires 0-10V enabled ballasts and drivers by others.

Visible System Components

Control Functionality

Occupant Enters:
All lights automatically turn on to maximum light level. Maximum light level is set to 80%.

When Occupied:
Manual: Occupant uses wall dimmer to set desired levels for all lights. Manual control cannot fully shut off the lights. Minimum light level is set to 10%.

Occupant Exits:
All lights automatically go to minimum light level 15 minutes after all occupants exit.

Emergency Mode:
Lighting connected to emergency power turns on to full output.

	PICO-WBX-ADAPT	Pico wallbox adapter	1	$ 9.50

Code Notes: For non-daylight open offices, all general lighting can be connected to a single 0-10V dimming module. Want to add a Vive wireless hub for more features? Go to lutron.com/vive for complete compatibility and design details. This solution requires 0-10V enabled ballasts and drivers by others.

Visible System Components

Pico wireless control

Radio Powr Savr wireless ceiling-mount occupancy sensor and daylight sensor

Control Functionality

Occupant Enters:
All lights automatically turn on to 50% light level. Occupant turns on lights to maximum level manually. Maximum light level is set to 80%.

Controlled receptacles automatically regain power when occupant enters.

When Occupied:
Automatic: Overhead lights dim/brighten based on daylight availability. There is one perimeter daylight zone.

Manual: Occupant uses wall dimmers to set desired light levels for all lights.

Occupant Exits:
All lights automatically turn off 15 minutes after all occupants exit.

50% of all receptacles automatically turn off 15 minutes after all occupants exit.

Add a Vive wireless hub to enable simple setup and re-zoning, system monitoring, timeclock functionality, and advanced integration.
