Recommended (Fixture Control) . . . . . 42

This document summarizes the lighting and receptacle control requirements for commercial buildings. It is for information purposes only. It is not meant to replace your state’s or local jurisdiction’s official energy code. Please refer to your local building energy code or authority having jurisdiction for your precise requirements. Only the authority having jurisdiction can guarantee code compliance.

Energy-saving lighting control strategies

Strategy		Potential savings
	<b>High-end trim/tuning</b> sets the maximum light level based on customer requirements in each space.*	10–30% Lighting
	<b>Occupancy/vacancy sensing</b> turns lights on when occupants are in a space and off when they vacate the space.*	20–60% Lighting
	<b>Daylight harvesting</b> dims electric lights when daylight is available to light the space.*	25–60% Lighting
	<b>Personal dimming control</b> gives occupants the ability to set the light level.*	10–20% Lighting
	<b>Controllable window shading</b> moves shades to reduce glare and solar heat gain.*	10–20% Cooling
	<b>Scheduling</b> provides scheduled changes in light levels based on the time of day.*	10–20% Lighting
	<b>Demand response</b> automatically reduces lighting loads during peak electricity usage times.*	30–50% During peak period
	<b>Plug load control</b> automatically turns off loads after occupants leave a space.*	15–50% of Controlled loads
	<b>HVAC integration</b> controls heating, ventilation, and air conditioning systems through a contact closure.*	5–15% HVAC

Codes can sometimes be complicated and difficult to navigate. This commercial application guide provides examples of how Lutron products can be used to meet or exceed code requirements. This guide focuses on Vive and Vive compatible solutions, but our other control systems offer similar features.

Lutron Product Capabilities: Commercial Applications

	Local Solutions			Panel Solutions	
	Wallbox	Vive	Vive with wireless hub*	Energi Savr Node	Quantum
Strategies for code/standards compliance	Occupancy sensing	●	●	●	●
	Multi-level lighting control	●	●	●	●
	Daylight harvesting		●	●	●
	Receptacle control		●	●	●
	Timeclock			●**	●
	Demand response		●†	●†	●
	Energy monitoring		●		●
	BACnet integration		●		●

To learn more about these products and their specifications, go to [lutron.com/catalogs](http://lutron.com/catalogs).

\* For the latest information on products compatible with the Vive wireless hub go to [lutron.com/vive](http://lutron.com/vive).  
\*\* Requires QS timeclock.  
† Automated Demand Response capability requires signal from a third-party device.

Summary of Requirements for Lighting and Receptacle Controls

IECC 2012

The requirements listed below are summarized for simplicity and may have other exceptions that were omitted.

	Minimum control type	Description	Code provision
Local Control	Switching	Lighting shall be capable of turning ON and OFF. There shall be at least one manual device for control of the lighting within a space. See code for spaces that allow remote location of control.	C405.2.1.1
	Multi-level or dimming <sup>1</sup>	Lighting shall be capable of being reduced by at least 50% of full power, in addition to being switched ON and OFF. There shall be at least one manual device for control of the lighting within a space. See code for spaces that allow remote location of control.	C405.2.1.2
Automatic Control <sup>3</sup>	Timeclock <sup>2</sup>	<b>Interior &amp; parking garages:</b> Scheduled control, based on time-of-day, turns lighting ON or OFF based on typical occupancy. Occupancy sensors also comply as an alternate to using a timeclock. <b>Exterior:</b> Scheduled control, based on time-of-day and sunrise/sunset (requires astronomical timeclock), turns lighting ON or OFF based on typical occupancy and daylight.	C405.2.2.1 C405.2.4
	Occupancy sensor	Automatic control turns lighting ON upon occupancy or OFF after a vacancy of 30 minutes or less.	C405.2.2.2
	Full ON	When initiated by a timeclock or occupancy sensor, lighting is automatically turned ON to maximum lighting power.	C405.2.2.2 Exceptions
	Partial ON	When initiated by a timeclock or occupancy sensor, lighting is automatically turned ON to 50% or less of maximum lighting power.	C405.2.2.2
	Full OFF	When initiated by a timeclock or occupancy sensor, lighting is automatically turned OFF.	C405.2.2.2
	Partial OFF	When initiated by a timeclock or occupancy sensor, lighting is automatically reduced by at least 50% of maximum lighting power. In some spaces, partial OFF is permitted but it is not a code requirement.	C405.2.1 Exception
Other	Daylight responsive control <sup>1</sup>	<b>Interior:</b> Manual or automatic control of sidelight and skylight daylight zones is required. When using automatic control, there must be at least two levels between ON and OFF. See the “Daylight Zone Requirements” for more information. <b>Exterior:</b> A photosensor can be used as an alternate to the dawn/dusk operation of an astronomical timeclock.	C202 C405.2.2.3 C405.2.4

For areas being used as a path of egress or fixtures being used for emergency, verify compliance with your local authority having jurisdiction. Acceptance (functional) testing is required for all new construction applications to ensure that control hardware and software are calibrated, programmed and functioning properly (Code provision C408.3).

1 When multi-level lighting control and/or daylight responsive control is required, Lutron recommends using continuous dimming to allow for smooth light level adjustment and maximized energy savings.  
2 Lutron recommends using occupancy sensors to achieve automatic on/off requirements in place of a timeclock to maximize energy savings and optimize user experience.  
3 Manual ON is always permitted for interior applications. Provide manual ON control when no automatic ON is indicated.

Daylight Zone Requirements

IECC 2012

Daylight Zone Requirements:

Fixtures in primary sidelight or skylight zones must be controlled by a daylight sensor in spaces greater than 10,000 sq. ft. or having greater than 30% window-to-wall ratio. All other daylit spaces only require a separate manual control for daylight zones.

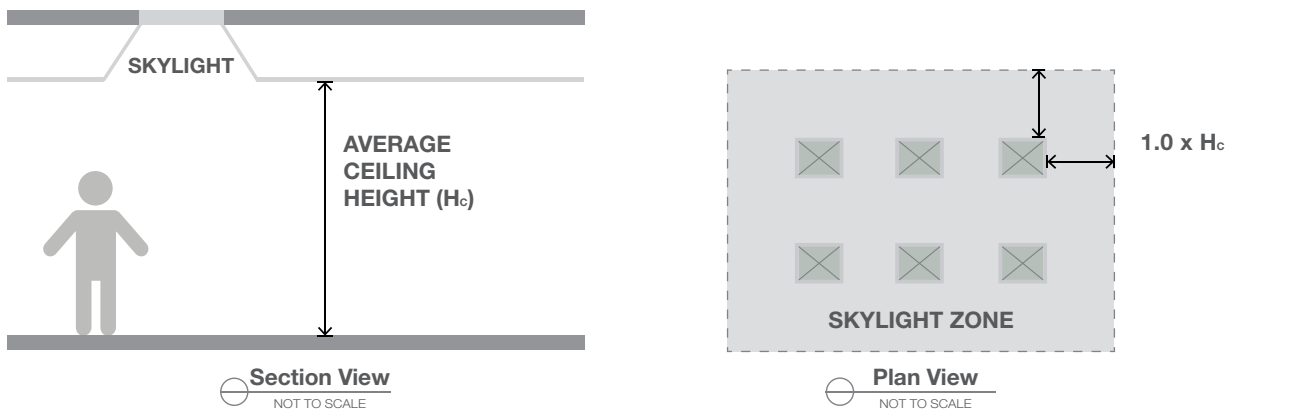

Daylight Exceptions:

Daylight control is not required for daylight zones enclosed by walls or ceiling-height partitions containing two or fewer luminaires.

Sidelighting (Window)

Toplighting (Skylight)

Suggested Code Compliant Solutions

IECC 2012

The compliant solutions listed below are suggested based on total installed cost, simplicity of design, and basic functional needs for the space. These solutions do not represent the only compliant options to meet lighting and receptacle control requirements. Applications in this guide will illustrate these solutions and/or alternative solutions for advanced functionality. ASHRAE 90.1 2010 can also be used as a compliance option in meeting IECC 2012 requirements.

		Atrium	Break Room	Classroom, Lecture Hall, Training Room	Conference, Multi-purpose Room	Egress Corridor <sup>4</sup>	Lobby
Local Control	Switching		⚙	⚙	⚙		
	Multi-level or dimming	⚙					⚙
Automatic Control <sup>2</sup>	Timeclock	⚙					
	Occupancy sensor		⚙	⚙	⚙	⚙	⚙
	Full ON					⚙	⚙
	Partial ON	⚙					
	Full OFF	⚙	⚙	⚙	⚙		⚙
	Partial OFF					⚙ <sup>3</sup>	
Other	Daylight responsive control	⚙	⚙	⚙	⚙	⚙	⚙

1 All retrofits altering more than 50% of the luminaires, or 10% with alterations to controls and/or circuits, must comply with all new construction requirements.

2 Manual ON is always permitted for interior applications. Provide manual ON control when no automatic ON is indicated.

3 Not a code requirement. Lutron recommends this solution for spaces designated as a path of egress.

4 For areas not designated as a path of egress, the occupancy sensor must turn lights to full OFF.

5 Timeclock ensures the lights are on when typically occupied. Occupany sensor controls lights when typically unoccupied.

This application guide is designed to help specifiers and contractors understand codes and Lutron controls in a simple manner. Each of the pages will lay out different spaces, the corresponding lighting control products for those spaces, and the way the system is set up in the space.

For Specifiers

Use this application guide for design suggestions, to understand the way the system operates and to specify the relevant products for each space.

For Contractors

Use this application guide to understand how the system is installed, the way the system must operate, and to order the correct products for each application.

Room type    Type of solution

Classroom | New Construction

IECC 2012

Symbol	Model Number	Description	Qty	List Price Each
	RMJS-16R-DV-B	PowRak switching module	3	\$ 155.00
	LRF2-VKLB-P-WH	Radio Power Save wireless corner-mount vacancy sensor	1	\$ 105.00
	PJ2-2B-GWH-L01	Pico wireless 2-button control	3	\$ 27.00
	PICO-WBX-ADAPT	Pico wallbox adapter	3	\$ 9.50

Code Notes: For non-daylight classrooms, all general lighting can be connected to a single switching module. Want to add a Vive wireless hub for more features? Go to [lutron.com/vive](#) for complete compatibility and design details.

Visible System Components

Pico wireless control

Pico wireless control

Radio Power Save wireless corner-mount vacancy sensor

Control Functionality

**Occupant Enters:**  
Lights do not automatically turn on when an occupant enters the space; lights must be turned on manually.

**When Occupied:**  
Manual: Occupant uses wall switches to turn on and turn off general, white-board lighting, and perimeter daylight zone.

**Occupant Exits:**  
All lights automatically turn off 15 minutes after all occupants exit.

Add a Vive wireless hub to enable simple setup and rezoning, system monitoring, timelock functionality, and advanced integration.

Control Strategies

Understand how the products are laid out in the space

Learn more about the products used in the space

- This guide offers up to three solutions per space type.
- The **Retrofit Solutions** are simple and inexpensive solutions, generally suited for a basic retrofit.
  - The **New Construction Solutions** are value driven, generally best suited for new construction.
  - The **Recommended Solutions** have advanced functionality for greater comfort and energy savings.

Type of solution

Learn about the products visible in the space and the different options available for these.

Learn what strategies are implemented in the space

Learn what energy savings you achieve over manual shut-off

Understand how the space functions with the installed system

This is a high-level overview of the local solutions layout. For individual room requirements refer to the detailed room type solutions in this guide. A single PowPak module can control a single or multiple fixtures. The products shown here are representative of local solutions. Multiple product options are available to meet the needs of the space.

-  Vive wireless hub\*
-  PowPak module
-  Occupancy sensor
-  Pico wireless remote control
-  Daylight sensor

**Vive wireless hub features:**

- Central control, management, and monitoring of Vive devices via web browser
- Supports astronomic and time-of-day events
- Two contact closure inputs for third-party integration, such as Automatic Demand Response
- Wi-Fi access for easy commissioning
- Control up to 10,000 sq. ft. with a single hub
- Optional BACnet integration

Symbol	Model Number	Description	Qty	List Price Each
	RMJS-8T-DV-B	PowPak dimming module with 0-10V	4	\$ 180.00
	LRF2-DCRB-WH	Radio Powr Savr wireless daylight sensor	2	\$ 150.00
	PJ2-4B-GWH-L31	Pico wireless 4-button scene control	1	\$ 45.00
	PICO-WBX-ADAPT	Pico wallbox adapter	1	\$ 9.50
	HJS-1-FM	Vive wireless hub	Shared	Consult your local rep for hub pricing and service options.

**Code Notes:** Requirements specified for 20-40 ft. atriums.  
Go to [lutron.com/vive](http://lutron.com/vive) for complete compatibility and design details.  
This solution requires 0-10V enabled ballasts and drivers by others.

Visible System Components

Pico wireless 4-button scene control

Radio Powr Savr wireless daylight sensor

Control Functionality

**When Occupied:**  
Automatic: Overhead lights dim/brighten based on daylight availability. There are two perimeter daylight zones.

Manual: Occupant selects scenes to set desired light levels for all lights.

**Timeclock:**  
Timeclock turns lights on to 50% light level during normally occupied hours. Maximum light level is set to 80%.

Timeclock turns lights off during normally unoccupied hours.

	RMJS-16R-DV-B	PowPak switching module	1	\$ 155.00
	LRF2-VCR2B-P-WH	Radio Powr Savr wireless ceiling-mount vacancy sensor	1	\$ 105.00
	PJ2-2B-GWH-L01	Pico wireless 2-button control	1	\$ 27.00
	PICO-WBX-ADAPT	Pico wallbox adapter	1	\$ 9.50

Want to add a Vive wireless hub for more features? Go to [lutron.com/vive](http://lutron.com/vive) for complete compatibility and design details.

Visible System Components

Control Functionality

**Occupant Enters:**  
Lights do not automatically turn on when an occupant enters the space; lights must be turned on manually.

**When Occupied:**  
Manual: Occupant uses wall switch to turn all lights off.

**Occupant Exits:**  
All lights automatically turn off 15 minutes after all occupants exit.

Add a Vive wireless hub to enable simple setup and rezoning, system monitoring, timeclock functionality, and advanced integration.

Symbol	Model Number	Description	Qty	List Price Each
	FCJS-010	Wireless fixture control with 0-10V	2	\$ 91.00
	FC-SENSOR	PowPak fixture sensor	2	\$ 40.50
	PJ2-3BRL-GWH-L01	Pico wireless 3-button with raise/lower control	1	\$ 27.00
	PICO-WBX-ADAPT	Pico wallbox adapter	1	\$ 9.50

FCJS models are capable of controlling up to 3 ballasts or drivers. Review the “Vive PowPak Fixture Controls” submittal document for more design details.  
Want to add a Vive wireless hub for more features? Go to [lutron.com/vive](http://lutron.com/vive) for complete compatibility and design details.  
This solution requires 0-10V enabled ballasts and drivers by others.

Visible System Components

Control Functionality

**Occupant Enters:**  
Lights do not automatically turn on when an occupant enters the space; lights must be turned on manually. Maximum light level is set to 80%.

**When Occupied:**  
Automatic: Overhead lights dim/brighten based on daylight availability. There are two perimeter daylight zones.

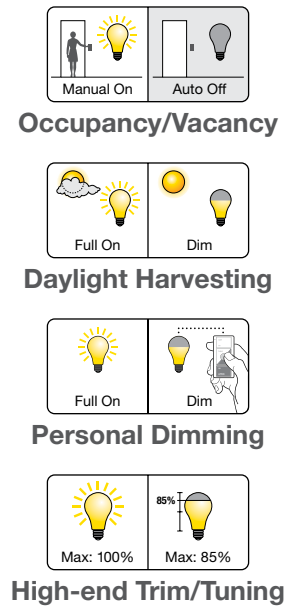

Manual: Occupant uses wall dimmer to set desired light levels for all lights.

**Occupant Exits:**  
All lights automatically turn off 15 minutes after all occupants exit.

Add a Vive wireless hub to enable simple setup and rezoning, system monitoring, timeclock functionality, and advanced integration.

Symbol	Model Number	Description	Qty	List Price Each
	FXSWLX4H	Lutron 4 ft. stairwell LED fixture	2 (per floor)	\$ 720.00
	LRF2-OKLB-P-WH	Radio Powr Savr wireless corner-mount occupancy sensor	1 (per floor)	\$ 105.00

**Code Notes:** Verify that the egress fixtures go to full output upon loss of control signal. For projects that require UL 924 compliance, provide an automatic load control relay (ALCR) per load controller connected to emergency fixtures. Add a daylight sensor for stairwells with daylight zones. Lutron stairwell fixture (FXSWLX44) is not currently compatible with the Vive wireless hub. A new model number is coming soon that will include Vive compatibility. Go to [lutron.com/vive](https://lutron.com/vive) for the latest compatibility details.

Visible System Components

Radio Powr Savr wireless corner-mount occupancy sensor

Control Functionality

- Occupant Enters:**  
All lights automatically turn on to maximum light level. Maximum light level is set to 80%.
- Occupant Exits:**  
All lights dim to minimum light level 15 minutes after all occupants exit. Minimum light level is set to 10%.
- Emergency Mode:**  
Lighting connected to emergency power turns on to full output.

**Code Notes:** For non-egress stairwells, see the recommended solution and set the minimum light level to full off.
