

Simple, scalable, wireless lighting control

Wireless load controls

Wireless sensors

Wall controls

Personal control

Optional facilities software

Restaurant solution Enhancing the customer experience

Background

Fast-casual restaurants are dynamic spaces that need to be efficient, simple, and — especially — safe for customers and workers. Proper lighting and controls can enhance a dining space's functionality for workers and atmosphere for customers.

Challenge

To support contactless experiences, controls should be automated and easy to use. Timeclocks, motion sensors, and simple wireless on/off controls are all ways to help promote these goals.

Opportunity

Wireless lighting control systems can enhance the customer experience in the facility and support ease of use by the employees. And with automation and control, a system can help maintain a level of safety and security to the space.

The solution

Vive by Lutron is a simple, flexible, scalable lighting control solution, built on a proven wireless platform, for new and existing buildings. It's also a "touchless" solution, as Vive helps minimise the spread of germs with automated, contactless wireless lighting control.

Why Vive — Work smarter, not harder

Save time.

Quick installation time — 70% faster than wired control solutions — means shorter timelines and lower costs. Controls install quickly, and you can do them overnight, one room at a time, with no rewiring necessary.

Proven technology – it just works.

Millions of wireless systems have been installed in restaurants, cafés, and eating establishments around the world, backed by industry-leading quality.

Solve problems. Adjust effortlessly.

Simple software, available on your phone, allows you to re-program or adjust settings from anywhere. And Vive evolves with you, allowing you to make changes in your wireless setup without rewiring.

Easy to grow. Simple to manage.

With Vive, you can start with one area and add other spaces over time, without any rewiring required. With the Vive app, facilities teams can make changes to lighting, see alerts on low battery warnings, and modify their spaces without calls to the manufacturer.

For more information on the Vive system and support on how to design, or for a quick sample bill of quantities contact eacs@lutron.com
