This document summarizes the lighting and receptacle control requirements for commercial buildings. It is for information purposes only. It is not meant to replace your state’s or local jurisdiction’s official energy code. The recommendations presented in this guide are based on the originally published code prior to addenda. Please refer to your local building energy code or Authority Having Jurisdiction (AHJ) for your precise requirements. Only the AHJ can guarantee code compliance.

Energy-saving lighting control strategies

Strategy	Potential savings
<div><div><div></div></div><div>High-end trim/tuning sets the maximum light level based on customer requirements in each space.*</div></div>	10–30% Lighting
<div><div><div></div></div><div>Occupancy/vacancy sensing turns lights on when occupants are in a space and off when they vacate the space.*</div></div>	20–60% Lighting
<div><div><div></div></div><div>Daylight harvesting dims electric lights when daylight is available to light the space.*</div></div>	25–60% Lighting
<div><div><div></div></div><div>Dimming control gives occupants the ability to set the light level.*</div></div>	10–20% Lighting
<div><div><div></div></div><div>Controllable window shading moves shades to reduce glare and solar heat gain.*</div></div>	10–20% Cooling
<div><div><div></div></div><div>Scheduling provides scheduled changes in light levels based on the time of day.*</div></div>	10–20% Lighting

Codes can sometimes be complicated and difficult to navigate. This commercial application guide provides examples of how Lutron products can be used to meet or exceed code requirements. This guide focuses on Vive and Vive compatible solutions, but our other control systems offer similar features.

Lutron Product Capabilities: Commercial Applications

Strategies for code/standards compliance				
	Local Solutions			Guestroom Solutions
	Wallbox	Vive	Vive with wireless hub*	Code-compliant guestroom solutions
Occupancy sensing	●	●	●	●
Multi-level lighting control	●	●	●	●
Daylight harvesting		●	●	
Receptacle control		●	●	●
Timeclock			●	●
Demand response†			● **	
Energy monitoring			●	
BACnet integration			●	●

To learn more about these products and their specifications, go to lutron.com/catalogs.

* For the latest information on products compatible with the Vive wireless hub go to lutron.com/vive.
** Requires QS timeclock.
† Automated Demand Response capability requires signal from a third-party device.

Summary of Requirements for Interior Lighting Controls

NECB 2015

The requirements listed below are summarized for simplicity.

Minimum control type		Description	Code provision
Manual Control	Switch	Lighting shall be capable of turning ON and OFF. There shall be at least one manual device for control of the lighting within a space. See code for spaces that allow remote location of control.	4.2.2.1 (3-5)
	Dimmer or scene control	Lighting shall be capable of providing at least one level between 30% and 70% of full power, in addition to ON and OFF. Continuous dimming also complies. There shall be at least one manual device for control of the lighting within a space. See code for spaces that allow remote location of control.	4.2.2.1 (9)
Automatic ON/OFF Control	Timeclock	Interior: Scheduled control, based on time-of-day, turns lighting ON or OFF based on typical occupancy. Occupancy sensors also comply as an alternate to using a timeclock. Exterior: Scheduled control, based on time-of-day and sunrise/sunset, turns lighting ON or OFF based on typical occupancy and daylight (requires astronomical timeclock).	4.2.2.1 (20-23) 4.2.4.1
	Occupancy sensor	Automatic control turns lighting ON upon occupancy or OFF after a vacancy of 20 minutes or less.	4.2.2.1 (16-17)
	Settings	Full ON	4.2.2.1 (7)
		Partial ON	4.2.2.1 (8)
		Manual ON	4.2.2.1 (6)
		Full OFF	4.2.2.1 (18-19) 4.2.2.1 (20-23)
		Partial OFF	4.2.4.1 (16-17)
Other	Daylight responsive control	Interior: A sensor which adjusts lighting in response to available daylight is required for sidelight and skylight zones. There must be at least two light levels between ON and OFF. See the “Daylight Zone Requirements” diagrams for more information. The perimeter 6.1 m. of parking garages with access to daylight must automatically reduce lighting power in response to daylight. Exterior: A photosensor can be used as an alternate to the dawn/dusk operation of an astronomical timeclock.	4.2.2.1 (10-15) 4.2.2.3 4.2.2.4 4.2.2.5 4.2.4.1
	Receptacle control	Receptacle control is not required by this energy code.	N/A
	Demand response	Demand response is not required by this energy code.	N/A

For areas being used as a path of egress or fixtures being used for emergency, verify compliance with your local AHJ.

Daylight Zone Requirements

NECB 2015

Daylight zone requirements

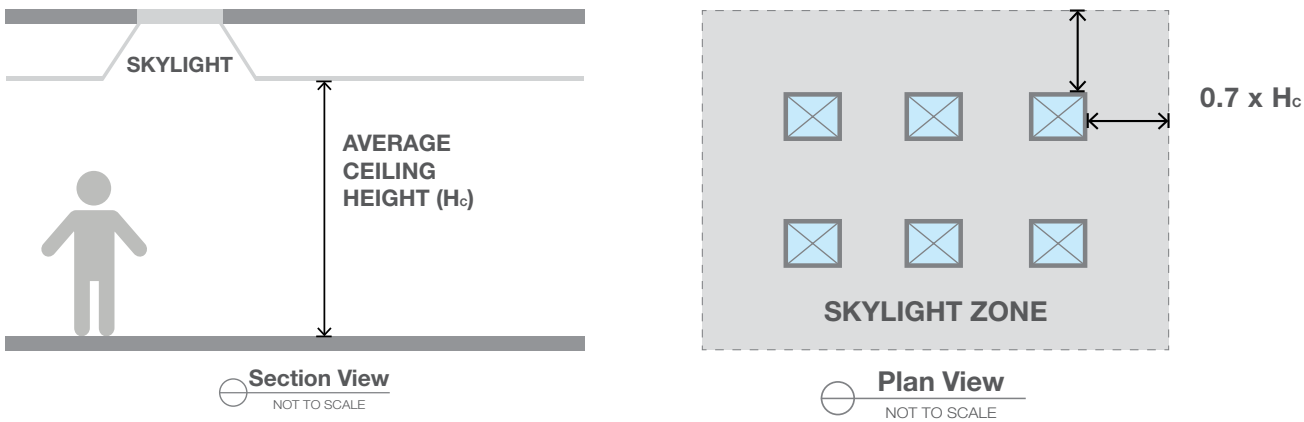

Daylight Zone Requirements:
Fixtures in the primary and secondary daylight zones must be independently controlled by zone. Sidelighted zones must be controlled separately from top-lighted zones.

Daylight Exceptions:
Daylight control is not required when the total lighting power of a daylight zone is less than 150W or when the total glazing area is less than 2 sq. m.

Sidelighting (Window)

Toplighting (Skylight)

This document summarizes the lighting and receptacle control requirements for commercial buildings. It is for information purposes only. It is not meant to replace your state's or local jurisdiction's official energy code. The recommendations presented in this guide are based on the originally published code prior to addenda. Please refer to your local building energy code or AHJ for your precise requirements. Only the AHJ can guarantee code compliance.

Suggested Code-Compliant Solutions

NECB 2015

The compliant solutions listed below are suggested based on total installed cost, simplicity of design, and basic functional needs of the space. These solutions do not represent the only compliant options to meet lighting and receptacle control requirements. Applications in this guide will illustrate these solutions and/or alternative solutions for advanced functionality.

		Atrium	Classroom, Lecture Hall, Training Room	Conference, Break Room	Corridor ²	Guestroom ³	Lobby ⁴	Open Office (>250 sq. ft.)
Manual Control	Switch					●		
	Dimmer or scene control	●	●	●	●		●	●
Automatic ON/OFF Control	Timeclock	●					●	
	Occupancy sensor		●	●	●	●	●	●
	Settings	Full ON			●		●	
		Partial ON	●					●
		Manual ON		●		●		
		Full OFF	●	●	●	●	●	●
		Partial OFF			●		●	
Other	Daylight responsive control	●	●	●	●		●	●
	Receptacle control							
	Demand response							

1 The NECB 2015 does not contain any requirements for retrofits.

2 To comply with some life safety code requirements for egress illumination, automatic full OFF is not suggested. For non-egress areas, the occupancy sensor should turn the lights to full OFF and a switching control may be used.

3 Automatic OFF is required for all luminaires and switched receptacles.

4 When typically occupied, the occupancy sensor provides partial OFF functionality. When typically unoccupied, the sensor provides full OFF functionality.

Suggested Code-Compliant Solutions

NECB 2015

Diagram key:
● = New construction¹

Parking Garage ⁵	Private Office (<250 sq. ft)	Restaurant/ Cafeteria, Retail	Restroom	Stairwell ²	Storage Room	Warehouse and Library Stacks ⁴	Facade/ Landscape	Other Exterior ⁶
			●		●			
	●	●		●		●		
●		●				●	●	●
●	●		●	●	●	●		
●			●	●			●	●
		●				●		
	●				●			
	●	●	●		●	●	●	●
●				●		●		●
●	●	●	●	●	●	●		

5 For entrances and exits, daylight responsive control is not required nor recommended, and the maximum light level is set to 50% at night.

6 Astronomical timeclock shall ensure all lights are off during daylight hours. Lights should be scheduled to partial OFF during night hours.

7 Not required for sidelight daylight zones in retail spaces.

This application guide is designed to help specifiers and contractors understand codes and Lutron controls in a simple manner. Each of the pages will lay out different spaces, the corresponding lighting control products for those spaces, and the way the system is set up in the space.

For Specifiers

Use this application guide for design suggestions, to understand the way the system operates and to specify the relevant products for each space.

For Contractors

Use this application guide to understand how the system is installed, the way the system must operate, and to order the correct products for each application.

Understand how the products are laid out in the space

NECB 2015

Visible System Components

Pico wireless control

Radio Powr Savr wireless corner-mount vacancy sensor and daylight sensor

Control Functionality

Occupant Enters:

Lights do not automatically turn on when an occupant enters the space; lights must be turned on manually. Maximum light level is set to 80%.

When Occupied:

Automatic: Overhead lights dim/brighten based on daylight availability. There are two perimeter daylight zones.

Manual: Occupant uses wall dimmers to set desired light levels for both general and white-board lights.

Occupant Exits:

All lights automatically turn off 15 minutes after all occupants exit.

Add a Vive wireless hub to enable simple setup and rezoning, system monitoring, timeclock functionality, and advanced integration.

Vive Local Solutions Layout

NECB 2015

This is a high-level overview of the local solutions layout. For individual room requirements refer to the detailed room type solutions in this guide. A single PowPak module can control a single fixture or multiple fixtures. The products shown here are representative of local solutions. Multiple product options are available to meet the needs of the space.

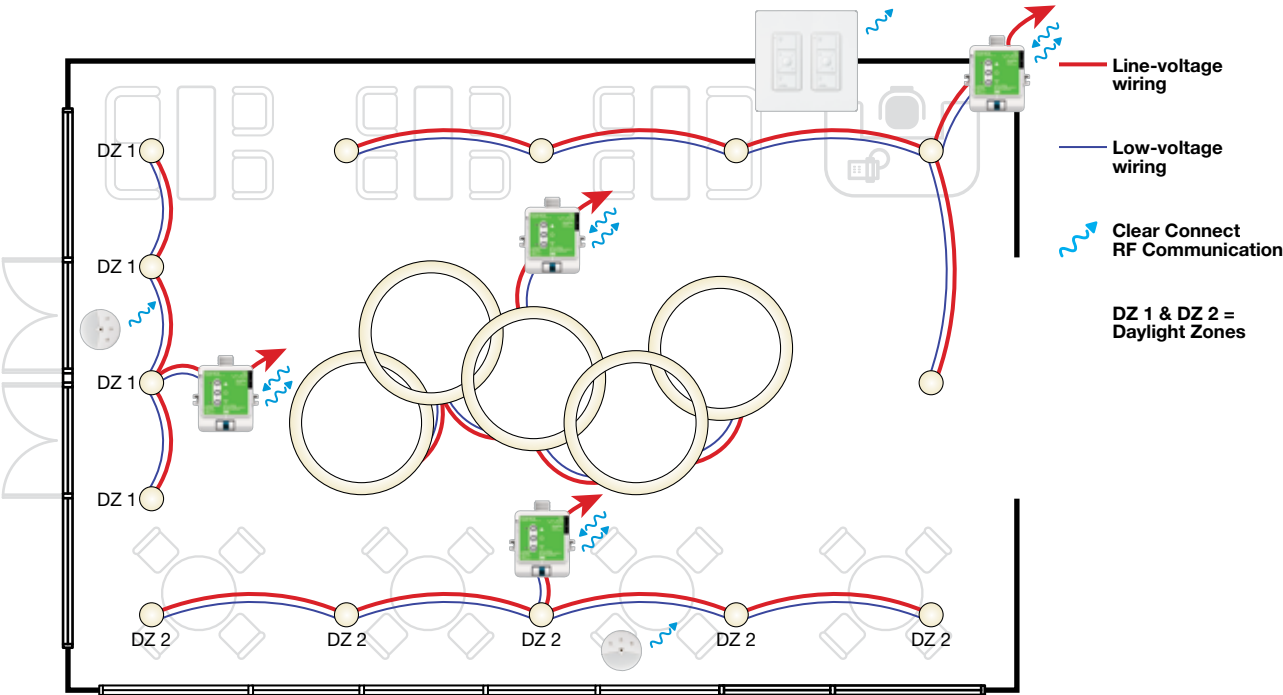

-  Vive wireless hub*
-  PowPak module
-  Occupancy sensor
-  Pico wireless remote control
-  Daylight sensor

Vive wireless hub features:

- Central control, management, and monitoring of Vive devices via web browser
- Supports astronomic and time-of-day events
- Two contact closure inputs for third-party integration, such as Automatic Demand Response
- Wi-Fi access for easy commissioning
- Control up to 10,000 sq. ft. with a single hub
- Optional BACnet and API integration

* Go to lutron.com/vive for complete compatibility and design details.

Control Functionality

Occupant Enters:
Lights do not automatically turn on when an occupant enters the space; lights must be turned on manually. Maximum light level is set to 80%.

When Occupied:
Automatic: Overhead lights dim/brighten based on daylight availability. There are two perimeter daylight zones.

Manual: Occupant uses wall dimmer to set desired light levels for all lights.

Occupant Exits:
All lights automatically turn off 15 minutes after all occupants exit.

Symbol	Model Number	Description	Voltage	Qty
	Integral to fixture ^{1*}	Integral fixture control	120V/ 277V	2 (per floor)
	RMJS-5T-347**	347V PowPak dimming module with 0-10V	347V	1 (per floor)
	LRF2-OKLB-P-WH**	Radio Powr Savr wireless, corner-mount occupancy sensor	N/A	1 (per floor)

* These products are for 120V applications.

** These products are for 347V applications.

1 Fixture control comes pre-installed in fixture. Look for the Clear Connect Wireless symbol for fixtures containing this module. Go to lutron.com/findafixture for a complete list of compatible fixtures and drivers.

Code Notes: Verify that the egress fixtures go to full output upon loss of control signal. For projects that require UL 924 compliance, provide an automatic load control relay (ALCR) per load controller connected to emergency fixtures. Add a daylight sensor for stairwells with daylight zones. This solution requires digitally enabled ballasts and drivers by others.

Visible System Components

Control Functionality

Occupant Enters:
All lights automatically turn on to maximum light level. Maximum light level is set to 80%.

When Occupied:
Manual: Occupant uses wall dimmer to set desired light levels for all lights. Manual control can not fully shut off the lights. Minimum light level is set to 10%.

Occupant Exits:
All lights dim to minimum light level 15 minutes after all occupants exit. Minimum light level is set to 10%.

Emergency Mode:
Lighting connected to emergency power turns on to full output.

Code Notes: For non-egress stairwells, set the minimum light level to full off.
