

Lutron Site Service (LSC-SITE-AUDIT)

Lighting control technology has changed significantly over the last decade, and if your system is more than a few years old, it might not be at its healthiest. A Lutron Site Audit Service is like an annual physical – a check-up on lighting system health status and functionality.

Lutron can provide an overall evaluation of your lighting control system(s) to help you:

- Evaluate how well your system is performing today
- Identify opportunities and strategies for enhancing system operation over time
- Offer maintenance and upgrade strategies to maximize system life

During the Site Audit we will assess the status of your lighting control systems on site and help you decide whether to maintain the status quo, optimize to improve performance, or replace an older system that may be compromising productivity and energy efficiency. It can be especially valuable if you are new to a space, and unfamiliar with the current system capabilities.

For more information, and to learn about all the service options available to help you get the most out of your lighting control system, visit the Lutron Services webpage at www.Lutron.com/services.
