

Persona PC

Personal Lighting and Window Treatment Web Browser Control Software

This feature is only available up to Quantum 3.2. It not offered in Quantum 3.4 and higher. Persona PC, a feature of the Lutron Quantum System, allows the occupants of a building to maximize their comfort and productivity by giving them control of their lighting fixtures and window treatments from devices that can run a web browser. Each individual, after logging in with a username and password, can control 1 or more fixtures as well as the window treatments in their private office or in their cubicle. Supports up to 10,000 users.

Job Number:	

Lighting Control

- Each user can be granted control of individual fixtures, groups of fixtures or the entire area.
- For dimmable fixtures, the software allows the user to set the light level of their fixtures to on or off or set the fixtures to a variable intensity from 0–100%.
- The user can save their favorite light level so that it is easy to recall later.
- Daylight Harvesting, High-End Tuning, and IntelliDemand Loadshed within an area will limit the maximum light level and power being used in that area.

Window Treatment Control

- Each user can be granted control of shade groups within an area.
- The software allows the user to set the shade position of their window treatments from 0–100% where 0% is equal to fully closed and 100% is equal to fully open.
- Each user can save their favorite preset shade position so that it is easy to recall later by clicking the Preset button.
- Shades controlled by Lutron Hyperion glare control software can be temporarily overridden by each user when controlling the shade from Persona PC.
